WORKFLOW AI

A New Collaboration Model for LTL Billing
Where Carriers and Brokers Collaborate

Transflo Workflow AI for LTL is an AI-driven billing collaboration platform that automates invoice validation, accelerates exception resolution and improves cash flow for carriers and brokers.

The Power of Workflow AI for LTL

Invoice Ingestion

Data Matching
Match Invoices to Shipments + Line Items

Audit
Broker TMS versus Carrier Invoice

No Exception

Exception Found

Auto or Manually Resolved

TMS ERP

Built for Carriers
Quicker Resolution & Better Partnerships

Instead of email chains, disconnected systems and delayed responses, Workflow AI for LTL creates a single system of record where carriers and brokers act on the same data, at the same time.

"With instant visibility into loads missing invoices, we can resolve exceptions immediately – driving faster payments, fewer delays and less back-and-forth. Visible statuses and targeted search also help identify trends and issues faster than prior manual processes."

– Ward Trucking

Agentic AI ✦
The Engine Behind the Collaboration

Traditional automation treats every exception the same way. Workflow AI for LTL takes a fundamentally different approach by deploying an army of specialized AI agents, each one purpose-built to handle a specific, high-impact exception type with expert-level reasoning in real time.

As teams see agents repeatedly make correct, well-documented decisions, behavior shifts from manual scrutiny to confident approval at scale. Every decision is explainable and auditable, enabling billing teams to manage outcomes rather than documents. Auditors can be 10 times as productive, so business can scale without adding headcount.

Why it Matters

⟶ Shorten billing & resolution cycles

⟶ Eliminate low-value manual work

⟶ Focus teams on revenue-impacting exceptions

⟶ Strengthen broker–carrier collaboration without friction

The Result

⟶ Up to 10× auditor productivity

⟶ Same-day exception resolution

⟶ Faster billing cycles and improved cash flow

⟶ Materially lower cost per load

⟶ Stronger, more transparent carrier-broker relationships

Collaboration-Driven Capabilities

Workflow AI for LTL's advanced analytics dashboards turn operational activity into strategic insight. With deep visibility into trends across brokers, carriers, agents, and internal teams, you gain the data needed to identify recurring issues, optimize performance, and make informed decisions that improve accuracy and strengthen partnerships.

Shared broker-carrier workspace for real-time resolution

Automated invoice matching and audit in seconds

Two-click exception resolution with in-platform communication

Complete, auditable system of record

Performance dashboards across brokers, carriers and agents
